Project Title	**Pizza Sales Analysis**
Tools	Power BI, MS Excel
Technologies	Business Analyst
Project Difficulties level	Intermediate

Dataset : The dataset is available in the given link.

Dataset Link

Project Overview

Objective: analyze pizza sales data from an Excel source to identify peak periods, popular products, and revenue drivers using Power BI measures.

About Dataset Contents

order_id: Unique identifier for each order

order_details_id: Unique identifier for each pizza within an order

pizza_id: Unique key for pizza details

quantity: Quantity ordered

order_date: Date of the order

order_time: Time of the order

unit_price: Price of the pizza

total_price: unit_price * quantity

pizza_size: S, M, L, XL, or XXL

pizza_type: Key for pizza details

pizza_ingredients: Ingredients used

pizza_name: Name of the pizza

Power BI Code

KPI's Requirements

Total Revenue = SUM(pizza_sales[total_price])

Average Order Value = [Total Revenue] / DISTINCTCOUNT(pizza_sales[order_id])

Total Pizzas Sold = SUM(pizza_sales[quantity])

Total Orders = DISTINCTCOUNT(pizza_sales[order_id])

Average Pizzas Per Order = [Total Pizzas Sold] / [Total Orders]

Daily Trend for Total Orders

```
SELECT DATENAME(DW, order_date) AS Order_Day, COUNT(DISTINCT order_id) AS Total_Orders

FROM pizza_sales

GROUP BY DATENAME(DW, order_date)
```

Monthly Trend for Total Orders

```
SELECT DATENAME(MONTH, order_date) AS Month_Name, COUNT(DISTINCT order_id) AS
Total_Orders

FROM pizza_sales

GROUP BY DATENAME(MONTH, order_date)
```

% of Sales by Pizza Category

```
SELECT pizza_category, SUM(total_price) * 100 / (SELECT SUM(total_price) FROM pizza_sales) AS PCT

FROM pizza_sales

GROUP BY pizza_category
```

% of Sales by Pizza Size

```
SELECT pizza_size, SUM(total_price) * 100 / (SELECT SUM(total_price) FROM pizza_sales) AS PCT

FROM pizza_sales

GROUP BY pizza_size
```

Top 5 Best Sellers by Revenue

```
SELECT TOP 5 pizza_name, SUM(total_price) AS Total_Revenue

FROM pizza_sales
```

```
GROUP BY pizza_name
ORDER BY Total_Revenue DESC
```

Bottom 5 Best Sellers by Revenue

```
SELECT TOP 5 pizza_name, SUM(total_price) AS Total_Revenue
FROM pizza_sales
GROUP BY pizza_name
ORDER BY Total_Revenue ASC
```

Dashboard Creation

-- Load Data --

- Open Power BI Desktop.
- Go to Home > Get Data.
- Select your file type (Excel or CSV).
- Select the file and click Load.

-- Prepare Calculations --

- Create Measure: Right-click your table > New Measure (use for your Total Revenue sum).
- Create Columns**:** Right-click your table > New Column (use for extracting "Day Name" or "Hour" from date/time).

-- Build Visuals --

- Step A: Click a chart icon from the Visualizations pane (Line, Bar, or Column).
- Step B: Drag your Category field (e.g., Name, Date, or Hour) to the X-axis (or Y-axis for horizontal bars).
- Step C: Drag your Value field (e.g., Revenue) to the Y-axis (or X-axis for horizontal bars).

-- Layout & Interactivity --

- Arrange: Click and drag the charts on the canvas to resize and move them.
- Add Filters: Click the Slicer icon and drag in a field (like Category) to make the dashboard clickable.
- Add Text: Use the Insert tab > Text Box for your title.

-- Save & Share --

- Go to File > Save.

Conclusion

By following these steps, you can create a comprehensive pizza sales revenue analysis using Power BI. This project will help you visualize sales trends, identify key insights, and make data-driven decisions to improve sales.
